

Paragon 5 - Coming Soon!!!

LPS Real Estate Group (LPSREG) is pleased to announce that version 5 of the popular Paragon MLS system is coming soon! We are excited to tell you that Paragon will be fully cross browser and cross operating system compatible. In addition, it will include innovative multi-tasking capabilities, a new CMA Wizard and Client Connect (the latest in client collaboration tools). Navigating your MLS with Paragon has never been easier!

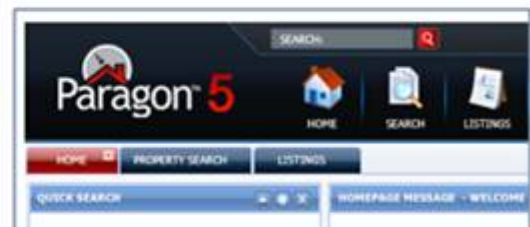

Cross Browser and Operating System Compatibility

Paragon 5 will be fully compatible with Microsoft Internet Explorer, Firefox, Apple Safari, Google Chrome, and Opera. With the addition of Safari to the family of browsers this means that Paragon will be fully operational on any Mac operating system!

Multi-Tasking made Simple!

Now agents can open multiple Property Searches, Listing Input/Maintenance, CMA or Contacts which appear as tabs within Paragon enabling multiple tasks in a single session!

Client Connect

Prospecting just got easier! Client Connect within Paragon will provide users with their own Agent webpage where they can differentiate themselves and directly communicate with their clients. When prospecting notifications are sent, clients are directed to the agent's webpage where they can login to view and interact with listings. Clients will be able to select or reject listings and leave comments on individual listings which go directly to the agent. A variety of views will be available and listings will display on an interactive Bing™ map.

User Interface

The Paragon User Interface has been completely updated. The homepage has been redesigned for enhanced personalization, including utilizing a 'widget' based approach giving users more flexibility to display the information they use on a regular basis! The unique Auto-Complete features added to Paragon 5 allow users to quickly select data or criteria with ease and increases overall productivity.
